DETAILED ACTION

Allowable Subject Matter

1. Claims 1-6 and 8-15 are allowed over prior art of record. The following is an examiner's statement of reasons for allowance: applicant's admitted prior art (APA) discloses an input information controller for receiving a first translation instruction sent from the terminal, the first translation instruction including location information representing a location of an object document to be translated, source language information representing an source language of the object document and target language information representing a translation target language of the object document, and obtaining the object document to be translated from a Web server on the basis of the location information (*referring to figure 1 and/or pages 2-3 of the Background section*); an information separator for separating the object document sent from the input information controller into a translation object part and a non-translation object part (*referring to figure 1 and-or pages 2-3 of the Background section*); a translator for translating the translation object part sent from the information separator according to the source language information and the target language information to obtain a translation result (*referring to figure 1 and/or pages 2-3 of the Background section*); a terminal device, operated by the user, for receiving URL of the document to be translated, the source language information and the target language information through an input dialogue displayed on the terminal device (*pages 2, lines 19-29 of the specification*); means for transmitting the URL of the document to the server (*referring to figure1 and-or pages 2-3 of the Background section*). Langenberg

(<http://translation.langenberg.com>) teaches an information converter for producing a retranslation instruction part for permitting the terminal to display (1) at least one language information input column for inputting the source language information and the target language information by the user (2) the location information, previously inputted by a user of the terminal, representing the location of the object document to be translated a second translation instruction including the source language information and the target language information in the language information input column and the location information of the object document to be translated, said location information being previously inputted by said user of the terminal in the first translation instruction (*referring to "Translating a Web Page" section; in re-translation, user need to input only the language information and not the URL, which was already received previously*).

Both APA and Langenberg fail to specifically disclose an information synthesizer for assembling the translation result sent from the translator, the retranslation instruction part produced by the information converter and the non-translation object part sent from the information separator and sending a synthesized result to the terminal.

Furthermore, it would have not been obvious to one of ordinary skill in the art at the time of invention to modify both of the prior art of record in order to obtain the claimed invention. Therefore, claims 1-6 and 8-15 are allowed over prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
